

2 ANTI-ROOST WIRES

Animal Friendly Solution To Prevent Birds From Perching!

Bracket for double anti-roost wires at the end set consists of 3 parts:

- 2 triangular brackets screwed together to a central holding bracket with 4 self-tapping screws
- another 4 screws attach the bracket to the conduit

To hold the wires:

- a hook with open and closed sides holds the insulated pulley
- this is repeated for both anti-roost wires
- each wire is secured with an anti-roost wire clamp

Middle support bracket for anti-roost wires is installed every 1.5 m on the length of the watering lines.

- a bracket is screwed to the conduit with 4 self-tapping screws
- a bolt and a nut set supports the conduit for winching purposes
- 2 wires will run through each bracket via 2 insulators

Bracket for double anti-roost wires at the regulator is similar to the end set bracket.

To hold the wires:

- a hook with open and closed sides holds a robust spring which holds an insulated pulley
- this is repeated for both anti-roost wires
- each wire is secured with an anti-roost wire clamp
